**Debris** is a unique granular sampler with advanced mouse-recording features. It allows you to record and playback your mouse moves on the fly and use them to control the sampler's parameters.

**How it works:** The instrument consists of a sampler part and 2 mouse buffers. Each buffer has its own record and playback settings. There are also 8 scenes (ABCDEFGH) which can be recalled by MIDI notes. Any sampler parameter can be dynamically controlled with the buffers.

Designed by Igor Shilov (aka Sonictwist)
